ATAC

Advanced Trigger Activated Control

Description:

The Advanced Trigger Activated Control (ATAC) System is the first-of-its-kind pressure washing accessory that will save you time, money, chemical, and energy. It converts your pressure washer into a 2-step system and works on most hot or cold pressure washers with 5-9 GPM output. The ATAC System allows for seamless 2-step washing and rinsing without letting go of the wand or stopping to change any switches, valves, or hoses. It's an automatic chemical injection process with simple trigger squeeze and release, which eliminates stoppages between steps.

Application:

Sets up in minutes by attaching the system to your pressure washer and chemical hoses and the power cord to your battery. Power the system on, select your mode, and begin washing. For 2-step mode: 1st trigger squeeze initiates rinse until released. 2nd trigger squeeze initiates chemical #1 (acid) until released. 3rd trigger squeeze initiates chemical #2 (detergent) until released. 4th trigger squeeze initiates rinse until released. Simply power off when complete. See table for other modes of operation.

General Specifications:

Model	B5	B7
Pump GPM	5-7 GPM	7-9 GPM
Rinse PSI	2000-2100	1900-2100
Chemical Application PSI	1300-1500	1000-1200
Chemical Draw (oz/min)	> 40	> 47
Spray Nozzle	≥ 08	≥ 14

Recommended Chemicals:

PRO-BRIGHT (Step 1)
Brown Bullet (Step 2)

Safe on Polished & Brushed Aluminum:

STA-BRIGHT (Step 1)
Northern Lights (Step 2)

Find these products in Our Products tab for more details and for a full list of other products available.

Mode Options:

0	Rinse Only
1	Rinse & Chemical #1 (acid)
2	Rinse & Chemical #2 (soap)
3	2-Step: Rinse & Both Chemicals
